

VIJAYVENKATESH JAYARAJ

AI & BUSINESS SOLUTION ANALYST

+1 (774) 525-6102 | vijayvenkateshj012@gmail.com | Princeton, NJ | LinkedIn

PROFESSIONAL SUMMARY

AI and business solution analyst with experience translating business requirements into reliable analytics, automation, and enterprise AI workflows. Builds data validation, reporting, document intelligence, and governance solutions that reduce manual effort, improve data quality, and support confident decisions.

PROFESSIONAL EXPERIENCE

AI & Business Solution Analyst | Princeton IT Services

May 2025 - Present

Princeton, NJ

- Build data validation and reconciliation workflows that improve accuracy across business and enterprise systems.
- Develop SQL and Excel-based checks to identify mismatches, reduce manual review, and support audit-ready reporting.
- Create SharePoint tracking logs to manage data issues, ownership, resolution progress, and operational follow-ups.
- Build AI-powered business agents and automation workflows for document review, information processing, and repetitive task reduction.

Assistant System Engineer | Tata Consultancy Services

Aug 2022 - Nov 2023

Kolkata, India

- Translated business requirements into technical solutions for enterprise reporting, monitoring, and data workflows.
- Automated ETL and reporting workflows using SQL, Databricks, Azure Data Factory, and reusable transformation logic.
- Modernized legacy data workflows with Spark SQL and Databricks to improve processing performance and reliability.
- Built validation checks to identify transformation errors before deployment and reduce downstream reporting issues.

SELECTED AI & BUSINESS SOLUTIONS

Product Label Comparison & Review Agent: Designed an AI-powered review platform using computer vision and OCR to compare packaging versions, detect content and layout changes, and generate client-ready reports with annotated evidence.

Microsoft 365 Governance Intelligence Platform: Developed centralized governance reporting for Microsoft 365 security, SharePoint exposure, identity management, Copilot activity, and administrative operations.

Regulatory Intelligence & AI Governance Agent: Built workflows that monitor regulatory websites, detect content changes, maintain version-controlled intelligence, and support enterprise authentication and monitoring.

Outlook Calendar Intelligence Agent: Developed a conversational assistant for natural-language meeting search, scheduling, attendee analysis, and operational monitoring.
